

MentiBY

LinkedIn Challenge Rules

Starts From

Sep 7, 2025

1) Daily Posting Rule

- Every student must post 1 update daily on LinkedIn.
- This post can be about:
 - What you learned in class/session/project today
 - A coding problem you solved
 - An error/bug you faced and how you solved it
 - A motivational/consistency update about your learning journey
- Consistency is key. Even a short post is fine, but make sure to maintain the streak.

2) Engagement Rule

- Along with posting, each student must give reactions and connect with at least 5 seniors or industry professionals daily.
- This helps you build a strong professional network and increases the visibility of your posts.
- Examples of engagement:
 - Liking or commenting on posts of seniors
 - Sending personalized connection requests with a small note like *"Hi, I'm currently learning at MentiBY. Would love to connect and learn from your journey."*

3) Sample Posts Document

- A document will be shared that contains ready-made ideas for posts.
- Example ideas from the doc:
 - *"Error faced & solved"* → Share a problem you encountered, how you debugged it, and the final solution.

- *"I thought I couldn't solve it, but I did"* → Share a challenge that seemed difficult initially but you managed to overcome.
- *"Today I learned ..."* → Share any new concept you learned in Java, DSA, or Projects.
- You can use these sample ideas whenever you feel stuck and don't know what to write. Also visit this doc (Swipe me Up)

4) Rewards & Recognition

- The best posts will be reposted from Mentiby's page so that you get extra visibility.
- Outstanding contributions will also be rewarded to motivate consistency.

MentiBY

LinkedIn Post Sample Post Ideas

Here are some sample ideas you can use when writing your daily LinkedIn posts:

1. Error Faced & Solved
 - Share a bug or error you faced, how you debugged it, and the final solution.
2. I thought I couldn't solve it, but I did
 - Share a tough coding challenge you managed to crack after multiple attempts.
3. Today I learned ...
 - Share any new concept you learned in Java, DSA, or projects.
4. Coding Problem of the Day
 - Post the LeetCode/GFG/assignment problem you solved, your approach, and what you learned from it.
5. Small Wins
 - Share small achievements like “I completed my first project module” or “I fixed a bug after 2 hours of debugging”.
6. Learning from Sessions
 - Write about what you understood from today's Mentiby session (Java, DSA, or Projects).
7. Motivation / Consistency Updates
 - Example: “Day 5 of my LinkedIn challenge – consistency feels tough, but I'm pushing myself every day.”
8. Sharing Resources
 - If you used a YouTube tutorial, blog, or documentation to learn something, share the resource with your takeaway.
9. Before & After Understanding
 - Example: “Earlier I thought HashMap was only for key-value storage, but today I learned how it actually works internally.”
10. Mistake & Lesson Learned
 - Share a mistake you made in coding (like forgetting a semicolon or logic error) and how you corrected it.

11. Peer Learning

- Mention how you learned something new from your batchmate or discussion during practice.

12. Daily Reflection

- End of the day reflection: “Today I struggled with recursion but I understood the base case importance. Tomorrow, I’ll practice more.”

13. Mini Projects / Practice Updates

- Example: “I built a small JS calculator today as part of practice. Excited to share my progress!”

14. Question to Audience

- Ask a simple question to encourage engagement, like “What was the toughest bug you solved recently?”

15. Journey Check-in

- Example: “It’s been 7 days since I started this LinkedIn challenge. Already feeling more confident in sharing my learnings.”

16. Analogy Learning

- Share a real-life analogy that helped you understand a coding concept.
- Example: “Recursion is like standing between two mirrors—keeps reflecting until you hit a base case.”

17. Favorite Concept of the Week

- Write about the concept you enjoyed learning the most this week.
- Example: “HashSet blew my mind today—no duplicates allowed, super useful in solving DSA problems.”

18. Study Routine / Productivity Hacks

- Share how you plan your daily learning or how you stay focused.

19. Celebrating Mentibby Sessions

- Example: “Today’s session on Spring Boot by Kaarthik sir cleared my doubts on APIs. Grateful to be learning with this community.”

20. “Did you know?” Post

- Share a fun fact or shortcut you just learned.
- Example: “Did you know? In Java, StringBuilder is faster than String concatenation in loops.”

21. Struggle Story

- Share something you couldn’t solve in one go, but you kept retrying.

22. Collaboration Wins

- Example: “Worked with my teammate today to debug a function. Together, we cracked it faster than doing it alone.”

23. Mini-Notes / Tips

- Post a small code snippet or learning tip.
- Example: “Tip: Always dry run recursion problems with small input before coding. Helps avoid infinite loops.”

24. Reflection on Past Mistakes

- Example: “Earlier I used to skip dry runs. Today I realized it’s a life-saver for logic errors.”

25. Motivational Post

- Example: “At first coding felt impossible, but now it’s becoming a daily habit. Don’t give up, small steps matter.”

26. Appreciation Post

- Appreciate mentors, peers, or someone who guided you.
- Example: “Big thanks to Praveen Anna for today’s DSA explanation—it made recursion so clear.”

27. First-Time Experiences

- Example: “Today I deployed my first Hello World API. Feels like a big step into backend!”
